DESCRIPTION

The IP58/IP58S/CKP58 Programmable Incremental Encoders are for standard applications with resolutions up to 65536 PPR (Pulses Per Revolution). This Programmable Encoder sets up its parameters by using software expressly written by Lika. The software program is supplied for free and can be installed on any PC with a Windows operating system that is Windows XP or later. This program sets up the working parameters of the encoder and monitors whether the encoder is working properly. The Encoders have an absolute core, but this is only so they may be programmed. Furthermore, it has a selectable index length of 90° or 180° encode level. There is a Push-Pull and Line Driver compatible output. To properly use the IP58/IP58S/CKP58 Programmable Incremental Encoder it is highly recommended to purchase the EC-IP/IQ58-M12 Programming Cable and the KIT-IP/IQ58 USB Programming Kit.

IP58/IP58S Series

- Mount the flexible coupling 1 on the encoder shaft
- Fix the encoder to the flange 2 (or to the mounting bell) by means of screws type M4 3;
- Mount the flexible coupling 1 on the motor shaft, then secure the flange 2 to the support (or the mounting bell to the motor);
- Make sure the misalignment tolerances of the flexible coupling 1 are respected.

CKP58 Series

- Fasten the anti-rotation pin 1 to the rear of the motor (secure it using a locknut);
- Mount the encoder on the motor shaft using the reducing sleeve 8 (if supplied). Avoid forcing the encoder shaft;
- Insert the anti-rotation pin 1 into the slot on the flange of the encoder; this secures it in place by grub screw 2, preset at Lika;
- Fix the collar 3 to the encoder shaft.
