(1) Value applies to the static sinusoidal drive, under specific heat sink and temperatures from 25°C to 110°C. Actual performance depends on heat sink configuration, system cooling conditions and the ambient temperature.
 (2) The tolerance of all performance and electrical specification is ±10%.
 (3) The value applies to the static sinusoidal drive at temperatures from 25°C up to 110°C, without heat sink.
 (4) The above "without heat sink" figure assumes a working condition of 1atm at a 25°C ambient temperature, with the stationary linear motor not in contact with any other objects, relying only on air convection for cooling. As all heat conductive objects in direct contact with the linear motor, including the sliding plate, linear guide, and base, can be considered a type of heat sink, the "with heat sink" figure should be taken as the primary reference for actual application design.
