

34D Series - Standard Stepper Motors

FEATURES

- **NEMA Size 34 Round Stepper Motor**
- **Best Selection for High Speed Applications**
- **1.8° Step Angle**
- **Torque - Up to 630 oz-in**
- **Can be Customized for**
 - **Winding Current**
 - **Shaft Options**
 - **Cables and Connectors**
 - **Lead Configuration**
 - **Conduit Box**

DESCRIPTION

The 34D Series Stepper Motors is a standard (round-bodied) style stepper motor. They have lower rotor inertia than square high torque motors which allow them to accelerate faster and offer higher torque at speeds greater than 25 revolutions per second. These motors are an excellent choice to replace many of the round stepper motors that were popular for many years. The motor comes in a standard 6-lead configuration with a broad line of motor windings and stack lengths available off-the-shelf. Anaheim Automation can also customize the winding to perfectly match your voltage, current, and maximum operating speed. Special shaft modifications, lead configuration, conduit box, cables and connectors are also available upon request. Often referred to as "legacy motors," the 34D series is a good cross to the Superior Electric Slosyn series M091, M092, and M093.

DIMENSIONS

(All units are inches)

	Common Phase 1 & 3 Common Phase 2 & 4	Black (BLK) White (WHT)	White/Black & White/Orange White/Red & White/Yellow

Step Angle Accuracy:	+/- 5% of one step
Resistance Accuracy:	+/- 10%
Inductance Accuracy:	+/- 20%
Temperature Rise:	100° C
Ambient Temperature:	-20° C to +50° C
Insulation Type:	Class B
Insulation Resistance:	1000M Ohms at 500VDC
